

Fighting Coronavirus

Disinfection Tunnel for People and Objects

UNIC sal – Old Roumieh Road – Nahr El Mot Industrial Area – Beirut – Lebanon

The emergency outbreak of coronavirus (nCoV-2019) has become a global pandemic. This emerging virus is causing health concern and putting patients at risk of developing severe respiratory complications. Human-to-human transmissions have been facilitating its spread primarily via breathable droplets and/or contaminated hands from surfaces that droplets have landed on.

It has been stated by the World Health Organization that one of the main reasons behind the aggressive transmissibility of the coronavirus is its capability of living on different surfaces for a period of up to several days. Besides wearing the proper protective equipment, it is necessary for one to undergo a full sterilization before entering any shared environment.

UNIC sal has found the most suitable and easy solution by assembling a specially built disinfecting Tunnel that guarantees the necessary sterilization of all clothes and handy-carrying outlets, such as hand-bags, valets, suitcases, luggage, etc.

The Tunnel is automatically activated once it senses an approaching individual. The emerging fog created by the machine covers the individual and his belongings completely with disinfectants, thus rendering sterilization. The machine automatically shuts down upon the individual's exit from the opposing end.

The selection of Sterilization Solution meets the World Health Organization's standards.

UNIC sal is also assembling larger Tunnels for Cars and Ambulances Disinfection.

Tunnels for Ambulances Disinfection undergo testing at the Factory before delivery

Cars and Ambulances Disinfection must be done with doors and windows opened in order for the disinfection process to be done accurately both inside and outside of the vehicle. Disinfection solutions for Cars and Ambulances have a wider selection of recommended Products.

UNIC sal has a large Installation and Maintenance Team in many countries in Middle East and Africa region ready to assist clients.
